Indonesia Premium Coffee "Meretas Citarasa Indonesia"

Coffee is Indonesia's leading export commodity which is the fourth largest foreign exchange earner after palm oil, rubber and cocoa. Paying attention to the role of coffee commodities which is quite important and promising in the national economy. The Coordinating Ministry for Economic Affairs initiated exhibitions and economic forums to actually encourage performance in solid collaboration with the national coffee industry stakeholders, with the title: Indonesia Premium Coffee Expo & Forum 2022.

The Indonesia Premium Coffee Expo & Forum 2022, is a collaboration between the Coordinating Ministry for Economic Affairs with key national coffee development stakeholders, such as the Indonesian Coffee Council (DEKOPI), the Specialty Coffee Association of Indonesia (SCAI), and the Indonesian Coffee Exporters Association (GAEKI). This activity was held to coincide with National Coffee Day, March 11, 2022.

Indonesia Premium Coffee Expo & Forum 2022 is a medium of information and communication between the Government, the business world and the community, through exhibition packaging and Coffee business forums, as a means of disseminating potential opportunities for mutually beneficial cooperation. repositioning the business to generate sales and key independent chain buyers, as well as promote and grow distribution networks and brand franchise opportunities for potential investors and diversify in today's market.

The main objective of this activity is to present coffee commodities in their contribution to the national economic recovery as a result of the Covid-19 pandemic. Built to expand information on coffee commodity maps with unique tropical varieties that other countries do not have, as a stimulator of economic growth in an effort to strengthen the community's economy. Mr. Eman Putera as Executive Director was present to represent SCOPI in this event to continue to contribute to the sustainable development of the coffee industry.

Gender Role in Coffee Agroforestry Practices

The introduction of agroforestry management best practices has consequences on household income streams and potentially on access to income-generating opportunities for different household members, namely wives, husbands and children (male and female). The study entitled "A Review of the Potential Impact of Intervention on the Diversity Coffee Agroforestry System on Gender Dynamics in Pagar Alam District, South Sumatra" was conducted by IDH, PT. Sucden Coffee Indonesia, JDE, and the World Agroforestry Center (ICRAF) in 2020 to understand the potential impact of interventions to diversify coffee farming agroforestry systems on gender dynamics at the household level (i.e. gender division of tasks and income contribution). This study is part of an implementation project that aims to improve the livelihoods of coffee farmers through diverse agroforestry systems in Pagar Alam District, South Sumatra.

There are challenges and potential impacts of changes in the case of agroforestry-based coffee cultivation on, for example; division of roles of men and women, distribution of income, division of roles in households and communities - In the past year, several members of SCOPI have joined forces to conduct a study with the theme "Potential Impact of Interventions and Agroforestry on Gender Dynamics" which took place in Pagar Alam Regency, South Sumatra. This study was conducted by IDH Foundation, Sucden Coffee, JDE and also supported by ICRAF. SCOPI as a sustainable coffee platform, a convener, which prioritizes strengthening human resources from upstream to downstream along the coffee supply chain in Indonesia, SCOPI wants to continue to increase the capacity of men and women, especially Master Trainers, members and partners of SCOPI.

Increasing women's opportunities and capacities is not only about empowering women, but more importantly, it is empowering households through increasing agricultural production and household incomes - For this, action is needed from coffee sector stakeholders in Indonesia to provide equal opportunities for capacity building for both male and female farmers

"If we look at the pattern or household of farmers as coffee farmers, there is a relationship between women and men in one unit. In Indonesia, a lot of plantation work is done together. So, obviously the involvement is high. women in coffee plantations. The gender approach is also very contextual, we cannot generalize to all regions. We need to do a gender assessment at the beginning, according to the needs of women and men, and it will be very different in each region."

- Elok Ponco Mulyoutami
ICRAF

Food + Beverage Indonesia

Food + Beverage Indonesia is Indonesia's ideal sourcing place for food-related businesses in the country with the opportunity to meet leading food processing technology suppliers, food ingredients and raw materials manufacturers, product distributors and service innovators. Food + Beverage Indonesia allows you to launch the latest products, machines, equipment and solutions needed to produce better quality food in Indonesia.

Food + Beverage puts a special spotlight on the coffee and tea industry in Indonesia through COFFEE & TEA EXPO, an event dedicated to highlighting Indonesia's expertise in brewing the best beverages worthy of world export. Designed to bring together buyers and sellers of trendy coffee and tea products, the Expo promotes local discoveries and international reinventions of Indonesian coffee and tea products. Exhibitor Profile COFFEE & TEA EXPO exhibition profile includes: Coffee and tea end products, Instant coffee, Tea Producers, Coffee Roasters, Coffee and tea plantation owners, Coffee and tea associations

At the festival which was held on 18-21 May 2022 at JIEXPO Kemayoran, SCOPI represented by Mr. Richard Atmadja as Chairman of the SCOPI Board of Directors was present to congratulate WAKENI and all parties involved for the implementation of the 2022 Food + Beverage Indonesia exhibition. We welcome and appreciate This activity is a form of support for the economic recovery program due to the impact of COVID-19 on the plantation sector, especially for coffee commodities and their derivative products.

As the 4th largest coffee producing country in the world, Brazil, Vietnam, and Colombia, sustainable production in the upstream and downstream sectors plays an important role in the sustainability of the coffee supply chain in Indonesia. SCOPI plays a role in maintaining the continuity of the supply chain through promoting sustainable cultivation practices (Good Agriculture Practices - GAP) to farmers and other activities including strengthening farmer organizations, market access, access to finance, geographical indications, to increasing Public Private Partnership (PPP).

SCOPI hopes that this exhibition can play an important role in introducing coffee products from business actors and farmer groups, as well as a place for business matching with the ultimate goal of achieving prosperity for all coffee industry players from upstream to downstream.

Nusantara Coffee PMO

The Ministry of State-Owned Enterprises (BUMN) launched the Kopi Nusantara project management office (PMO) to encourage the advancement of the Indonesian coffee industry ecosystem. PMO Kopi Nusantara consists of elements of state-owned and national private companies, associations, and research and development (R&D) institutions.

The establishment of PMO Kopi Nusantara is a form of commitment and concern in an effort to improve the coffee industry in Indonesia. "Through PMO Kopi Nusantara, we want to build or improve the supply chain ecosystem of the coffee business in Indonesia by coordinating, synergizing with all components to improve the coffee industry, starting with SOEs, private companies, associations, and of course R&D institutions," said Dwi Sutoro at the kick off event. off and launching of PMO Kopi Nusantara in Lampung which was also broadcast online,

The PMO consists of elements of state-owned and national private companies, associations, and research and development (R&D) institutions. Erick hopes that PMO Kopi Nusantara will be able to accommodate the interests of the coffee business and encourage the domestic coffee industry to be globally competitive.

Not only that, the coffee ecosystem also makes coffee prices competitive, both among farmers and SMEs. The price will be the main driver of the domestic coffee business in the international market.

The state companies involved in the PMO are Holding Perkebunan Nusantara or PTPN III (Persero), PT Perhutani (Persero), PT Pupuk Indonesia (Persero), PT Bank BRI Tbk, and PT Rajawali Nusantara Indonesia (Persero) as the holding company for the Food SOEs. . For the private sector, there are Mayora, Dua Coffee, Common Ground, and Stella. Then, the associations involved are the Sustainable Coffee Platform of Indonesia (SCOPI) and the Specialty Coffee Association of Indonesia. Meanwhile, the research institutions are the Indonesian Coffee & Cocoa Research Center, as well as BUMN R&D.

To support this program, Mr. Eman Putera as the Executive Director together with Mr. Ilham Dagdo as the Program Coordinator of SCOPI visited one of the SCOPI demonstration plots in Central Aceh as a follow-up to the discussion between SCOPI-PMO Kopi Nusantara in including the SCOPI program in Central Aceh as one of the PMO Kopi Nusantara Pilot Project. Activities include field visits to the SCOPI Demo Plot, visits to several relevant stakeholders, and local farmers' gardens.

“Indonesia Coffee Export Development Program”

Collaborating with the Central Aceh District Government, SCOPI has officially started the "Indonesia Coffee Export Development Program" cooperation program supported by . The kick-off meeting was held in the Meeting Room of the Regional Secretary of Central Aceh Regency on October 13, 2021, in order to establish the goals, objectives and targets to be achieved and strengthen the commitment of each party involved for the next five years.

As a follow-up to this collaboration, SCOPI in collaboration with the International Islamic Trade Finance Corporation (ITFC) held a Training of Farmers which was held on May 24, 2022, which was attended by the Temas Miko Farmer's Group, Tanoh Abu Village, Atu Lintang District, Central Aceh. Mr. Salman Pademun, as MT SCOPI and resource person at the training delivered material on the topic of making Terra Preta. Terra Preta or dark land is a unique form of land created through human activities. This anthropogenic soil has several unique properties; besides being very fertile and maintaining that fertility for hundreds of years, Terra Preta is also a form of carbon sequestration. These two properties have caused widespread interest in Terra Preta around the world, with some even proposing that it could be used to make carbon negative fuels, using an energy generation technique called gasification.

To make Terra Preta, people use a technique called slash and charcoal, in which parts of the forest are cut down and burned with low-intensity fires that are partially extinguished to produce charcoal. This charcoal, in turn, locks in the carbon instead of releasing it into the atmosphere, which explains why people are excited about the possibility of using Terra Preta as a carbon sequestration tool. In addition, the content of the Terra Preta blend makes it extremely rich, encouraging beneficial bacteria and fungi to grow.

In addition to Terra Petra, this training was also socialized on the breeding of Trichoderma as a biological agent for fertilizer and prevention of root fungal diseases. Richoderma is a fungus that controls soil-borne (soil-borne) diseases. He is an antagonist agent, namely microorganisms that interfere with the activity of plant disease-causing pathogens. Trichoderma is used to control wilt disease either Fusarium (fungus) or Xanthomonas sp. and Pseudomonas sp. (bacteria) and can control clubroot in cabbage and white root in plantation crops.

"Training of Farmers"

Three training activities were conducted during the month of June with 49 participating farmers, of which 23 had received their first training in the previous month (Group Tani Mekar Sari). GAP topics presented to farmers are tailored to the needs of each region. In the first year of the MUG program, beneficiary farmers will receive at least two trainings with intensive assistance from a Master Trainer (MT). Pre-training activities were also carried out in June to prepare for training activities in July and targeted around 129 farmers. The details of training activities in June and preparation of training plans in July are:

- June 3, 2022 - Mount Bahgie (Coffee Harvest and Post Harvest Handling)
- 10 June 2022 - Mekar Sari (Making Biochar and Terra Preta)
- 17 June 2022 - Simpang Juli (Shade Plant Management, Making Infiltration Hole, Pest & Disease Control)

Info Sekretariat

On June 14, 2022, the SCOPI Secretariat Team Mr. Eman Wisnu Putra (Director of SCOPI), Mr. Bagus Prasetya (Program Manager) and Mr. Ilham B. Widagdo (Program Officer) received a visit from the KU Leuven-Belgium research team, namely Ir. Janne Bemelmans and Charline Depoorter, who are part of a multidisciplinary research project on Voluntary Sustainability Standards (VSS), entitled VSS4F/WOOD1. On this occasion, SCOPI discussed in more detail the mechanisms and practices of the certification program for coffee commodities and the sustainability program currently being carried out by SCOPI.

On 21-22 June 2022, SCOPI was invited to participate in an event held by the Indonesian Ministry of Foreign Affairs with the topic Commodities Update - The Diplomation of Sustainable Coffee Indonesia and Its Competitiveness in the Challenges & Opportunities in Development of Sustainable Coffee Commodity in Indonesia sub-topic. Mr. Eman Putera as the Executive Director of SCOPI was present as a resource person at the related event. It is an honor for SCOPI to contribute constructively to the Government of Indonesia in this special event to raise awareness of the challenges and opportunities in developing sustainable coffee practices in Indonesia.

SCOPI participated in the @Indonesia Premium Coffee Forum and Expo which was held on 24-26 June 2022. SCOPI attended this exhibition to introduce coffee from SCOPI MTs (Abah Ayi, Erwinda Meriko, Jajang Slamet, Abdul Munim, Muhammad Alghazali Qurtubi, I Wayan Warta, Pak Salman, and Pak Alpian) and as a step in realizing the sustainability of coffee in Indonesia.

In addition, in the Indonesia Premium Coffee series, a Field Trip was held to Classic Beans, Gunung Puntang, which is a member of SCOPI. Classic Beans is a coffee farmer cooperative in West Java founded by Eko Purnomowidi with eight friends in 2008.

Still in June 2022, the SCOPI Secretariat also received a visit from the E-Com Asia team represented by the Sustainability Manager of Ecom Asia, Laurent Bossolasco and also the Indonesia Sustainability Manager, Pak Wagianto. During this visit, SCOPI and Ecom specifically discussed the sustainability program carried out by SCOPI, as well as the possibility of collaboration between the two parties on the program.
